## Real Customer Results

- Customer was complaining of poor system performance and the partner support team was able to show that the customer was streaming Spotify and had a dozen web applications open in the browser at one time.
- Identified an error in a Microsoft report query that was causing the report to fail, reported this to Microsoft and they fixed it in a global update for Microsoft Dynamics 365 Business Central.
- Discovered inefficiencies in custom solutions that were negatively impacting the user experience and adjusted them for the current use case improving system performance.
